Backend Framework

Utilizing **Spring Boot** provides a comprehensive framework for building and deploying Java-based applications. This allowed for efficient handling of complex functionalities, such as database interactions, API development, and overall project structuring, enabling a more seamless and rapid development cycle.

API Documentation

Swagger provides a clear and interactive documentation platform for our API and ensures a smooth understanding of endpoints.

Figure: Swagger

Controllers

The image shows a REST API documentation interface. It features two main sections: 'user-controller' and 'person-controller'. Each section contains a list of endpoints with their respective HTTP methods and URLs. The endpoints are color-coded: green for POST, blue for GET, and red for DELETE. Each entry has a dropdown arrow on the right side.

Controller	Method	Endpoint
user-controller	POST	/users/list
	GET	/users/
	POST	/users/
	DELETE	/users/
	GET	/users/{userId}
person-controller	POST	/persons/list
	GET	/persons/
	POST	/persons/
	DELETE	/persons/

POST	/cities/list
GET	/cities/
POST	/cities/
DELETE	/cities/
GET	/cities/{id}
authentication-controller ^	
POST	/auth/logout
POST	/auth/login
content-of-birth-controller ^	
GET	/generator/DownloadContentOfBirth/{id}

API Testing

Insomnia streamlines the testing phase by ensuring reliability and effectiveness, allowing for thorough testing and validation of API functionalities.

Figure: Insomnia

Database

H2 Database provides a reliable and efficient storage solution, and smooth data management ensuring a secure and organized database foundation for our application.

Figure: H2 Database

Frontend Development

HTML, JavaScript, CSS, and Bootstrap collectively enriched the user interface to provide a visually appealing, responsive, and user-friendly design, enhancing the overall experience.

Main Page

The image shows a web form on a light gray background. At the top, there is a large white rectangular area. Inside this area, there is a text input field with the placeholder text "Enter Your Identifier". Below the input field is a dropdown menu with the text "Persons" and a downward arrow icon. Below the dropdown menu is a blue button with the text "Generate Content Of Birth".

Possible Enhancements

■ **Security Enhancement:**

Ensure a more secure data transmission (Implement JWT for user authentication).

Strengthen security with improved user authorization mechanisms.

■ **Front-End Development:**

Enhance the user-friendly design with more responsive features.

■ **Enhancing PDF Style:**

Design a more visually appealing PDF (Implementing the Thymleaf Spring Dependency).
